

Transcribed and summarised notes of interview with Przemysław Raczyński
Date: 3 November 2022

Describe yourself

My name is Przemysław Raczyński and I professionally teach computer science in III high school in Katowice. I also conduct academic research in physics. I feel the need to maintain my strategical thinking skills, so I play TicTacToe with my colleagues.

What do you feel when you play TicTacToe?

It seems like something is missing. The idea of the game is neat and ingenious, yet through all these years it begins to feel undemanding. After thousands of games the repetitive sequence of drawing four intersecting lines becomes tedious.

How well do your opponents play?

They do are not good opponents. At least against my experience of many games played, they are easy to beat.

Did you try any solutions yourself?

Yes, in fact I did. All of them were online. I found them on my laptop with the Linux operating system. They are too slow, or simply do not fit my preferences.
